[GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Fullstack Developer with a strong foundation in React, Next.js, Node.js and NestJS. Experienced in building responsive front-end interfaces and RESTful APIs. Fast learner with a focus on delivering user-centric web applications.

Skills

Frontend: React, Next.js, JavaScript, TypeScript, Tailwind CSS

Backend: .NET, Node.js, Express, NestJS, Java, C#

Database: SQL, T-SQL, MongoDB, Firebase

Tools & DevOps: Git, Docker, CI/CD, Jest, Figma, Jira

Methodologies: SCRUM, Agile, Code Reviews, REST API Design

Operating systems: Windows, Linux

AI agents: Chat GPT, GitHub Copilot

Education

Lublin University of Technology
09.2020 – 01.2024

Computer Science, Software Engineering (Bachelor of Engineering).

Certificates

English (C1) – LanguageCert Level 2 Certificate in ESOL International (LanguageCert Test of English C1) issued by LanguageCert.

.NET FullStack Developer – .NET FullStack Developer Specialization, issued by Board Infinity through Coursera.

Languages

English – C1

Polish – native

Experience

PUP Świdnik | IT Specialist

12.2024 – 10.2025

- Managed local networks and large-scale websites for municipal offices
- Assembled and configured office computer hardware

Britenet | Intern React Developer

07.2024 – 09.2024

- Developed a responsive web application in React/Next.js and Tailwind CSS
- Integrated Firebase for real-time data
- Improved load speed with SSR and lazy loading

EPAM Systems | Trainee .NET developer

02.2024 – 06.2024

- Developed additional features in project using advanced .NET technologies such as Entity Framework, LINQ, SOLID architecture and OOP
- Used Dependency Injection and custom Middleware to enhance architecture
- Implemented three-layered architecture

Freelance Developer

09.2023 – 02.2024

- Designed and created scripts for FiveM platform using LUA, JavaScript and QBCore Framework
- Implemented middleware and event-driven architecture for asynchronous operation handling
- Managed robust client-server networking and database interactions using relational database

Project SARA | Unity Developer

11.2019 – 10.2020

- Programmed AI and physics systems using Rigidbody, created custom scriptable objects for modular game features
- Participated in several months of workshops focused on C# and Unity programming

Projects

LOL Data – Riot API analytics tool

- Developed and implemented a full stack analytics platform using NestJS, Next.js and MongoDB
- Integrated the Riot Games API to fetch player account, summoner and match data for personalized game analysis
- Built secure user flows with JWT authentication, account linking and protected application routes
- Designed and implemented frontend with React Query, React Hook Forms, Zod, Tailwind CSS and Recharts to display performance metrics and match insights
- Structured the project with reusable modules, typed interfaces and clean separation of concerns to improve maintainability and scalability

V-Journal

- Collaborated in a team to build a Jira inspired project management application for task tracking, team assignment and project organization
- Developed a responsive and inreactive frontend using Next.js, Tailwind CSS and shadcn/ui, focusing on performance, usability and clean UI design
- Implemented authentication, authorization and structured data management to support secure access and organized project workflows
- Used Firebase as the primary backend database and integrated supporting libraries for real-time updates, form validation and accesibility
- Leveraged TanStack React Query for efficient data fetching, caching and server state synchronization across the application
- Integrated ChatGPT powered task generation, allowing users to create detailed tasks from short natural language prompts
- Built the application with a mobile-first, scalable and modular architecture to support maintainability and smooth user experience across devices

Christmas Advent Calendar

- Developed an interactive Next.js advent calendar application for songs and movies, featuring randomized content delivery and a responsive user experience
- Implemented MongoDB backend API routes to fetch random items for each calendar using server-side aggregation and structured data models
- Built reusable components for the main calendar view, card interactions and navigation to reduce duplication and improve maintainability
- Created date based unlock behaviour with persistent local storage, toast notifications and animated flip cards to enhance user engagement
- Designed a mobile friendly and responsive interface using TailwindCSS and modular UI components to ensure a consistent experience across devices

Mobile Storage system

- Developed a React based business management application for logistics operations
- Implemented protected routes and authentication aware UI behaviour, showing or hiding content based on session state and user access
- Built a scalable frontend architecture using React Router, reusable layout components and shared state management patterns
- Integrated UI libraries such as Material UI and Font Awesome to create a clean and responsive interface
- Supported role based application behaviour through cookies and role handling

Hobbies

Football, cycling, RPG, cooking, reading fantasy books and novels, music, learning new technical topics, creating applications
