

Aliaksei Varabyou

Senior Frontend Developer (React/TypeScript)

Wrocław, Poland

aleksey.vorobyov@gmail.com | (+48) 508-038-320 | www.linkedin.com/in/alekseyvorobyov

Executive Summary

Senior Frontend Developer with 8+ years of experience building maintainable web UIs with React and TypeScript, spanning product and enterprise delivery. Strong in component architecture, state management (Redux, Redux Toolkit), performance optimization, and collaborative development in Agile teams. Experienced with testing (Jest, React Testing Library, E2E in custom frameworks), code reviews, and incremental modernization of UI stacks. Targeting Senior Frontend Developer roles focused on React/TypeScript ownership and high-quality delivery.

Core Skills

React | TypeScript | JavaScript (ES6+) | NextJS | Redux / Redux Toolkit | React Query | HTML5 | CSS3 | SASS/SCSS | Tailwind CSS | Material UI | Styled-Components | REST APIs | GraphQL | WebSockets | Jest | React Testing Library | Webpack | Vite | ESLint | Prettier | Git | GitHub Actions | Jenkins | Jira | Confluence | Agile/Scrum

Professional Experience

Freelance — 09.2025 - 01.2026
Frontend Developer

Responsibilities

- Built and owned React + TypeScript features for an early-stage tourism web application (attractions, routes, points of interest).
- Designed a reusable component system and scalable UI structure for fast product iteration.
- Implemented Redux-based state management and asynchronous data flows for dynamic pages.
- Collaborated directly with stakeholders on UX iterations and evolving business requirements.

Key Achievements

- Integrated AI prompt-based queries to retrieve, structure, and enrich attraction data for user-facing experiences.
- Improved responsiveness and accessibility across devices through focused UI and performance tuning.

EPAM Systems — 04.2024 - 08.2025
Software Engineer (Frontend)

Responsibilities

- Developed UI for smart TV applications (Vizio/Walmart), delivering interfaces using an internal XML-based templating technology.
- Wrote E2E tests using a company internal custom framework to validate UI behavior across flows.
- Built web-based interfaces using Svelte; worked with JavaScript/TypeScript, HTML, and CSS within team processes.

Key Achievements

- Maintained delivery quality by combining UI development with automated E2E coverage and structured defect prevention.
- Demonstrated adaptability by switching between internal UI stack and modern web frameworks while keeping frontend fundamentals (architecture, state, testing) consistent.

EPAM Systems — 12.2023 - 04.2024
Software Engineer (Frontend) - Charity Educational Platform

Responsibilities

- Developed UI for a Next.js application based on Figma designs using Tailwind CSS.
- Built responsive and accessible pages following design specifications.
- Integrated AWS-based authentication into the frontend application.
- Collaborated with designers and developers in an Agile team environment.

Key Achievements

- Delivered consistent, pixel-accurate UI aligned with design system and UX requirements.
- Improved development speed by applying reusable UI patterns and Tailwind-based structure.
- Successfully integrated authentication flow, ensuring secure and smooth user access.

EPAM Systems — 08.2021 - 12.2023
Software Engineer (Frontend) — C3 Platform Developers for Shell

Responsibilities

- Designed and developed the frontend for a platform team in an Agile environment (dev team of 10).
- Built and maintained UI modules with React, Redux, MobX, HTML, CSS, and JavaScript.
- Performed code review, verification, and optimization to improve maintainability and runtime behavior.
- Tested existing functionality and supported iterative enhancements to the UI.

Key Achievements

- Strengthened code quality through systematic reviews and refactoring-focused optimization.
- Improved team delivery by aligning frontend implementation with platform requirements and shared UI patterns.

Responsibilities

- Designed and implemented frontend modules using React and Redux with HTML, CSS, and JavaScript.
- Estimated tasks, delivered features iteratively, and collaborated via Jira/Confluence-based workflows.
- Conducted code review, verification, and optimization of implementation.

Key Achievements

- Increased maintainability by applying consistent component patterns and review-driven improvements.

Previous Experience

- 06.2019 - 01.2021 — Belitsoft — Full Stack Developer: React/Redux frontend plus Laravel and MySQL backend for a hotel booking system; set up a test server with nginx; customer communication and task estimation.
- 03.2018 - 06.2019 — Belitsoft — Software Engineer: Telemedicine portal UI development with React/Redux; testing and code review.
- 04.2017 - 02.2018 — Belitsoft — Software Engineer: Admin system development (Laravel + AngularJS); unit tests with Cucumber.
- 10.2015 - 01.2017 — Belitsoft — Software Engineer: Client-facing web development with AngularJS and PHP; requirements and technical conditions; code review.
- 03.2013 - 09.2015 — Hypernet — Software Engineer: Education-market platform development (PHP, SOAP/WSDL, Ext JS); TDD-style approach; performance and database optimization.
- 08.2009 - 03.2013 — Prontosoft — Software Engineer: High-load web projects; optimization, caching, code reviews, and unit tests.

Education and Certifications

Bachelor's degree in Software Engineering (Graduated 2007)
