

NAZAR KUCHYNSKYI

FRONTEND ENGINEER

+48733703796 • nazarkuchynskyi@gmail.com • <https://www.linkedin.com/in/nazar-kuchynskyi/> • Poland, Warsaw

Summary

Frontend Engineer with 3+ years of experience across various products, such as SaaS, e-commerce and web3. As an engineer, my job is not to just add a feature to a project or fix the existing one. My goal is to satisfy both customer and business needs. Skilled in building scalable, user-focused web interfaces and maintaining clean, reusable code within modern React ecosystems. Open to various projects to bring impact and high delivery.

Experience

NDA - High-load consumer web platform targeting multilingual markets across Asia, Europe and North America

Middle Frontend Engineer

10/2025 - Present

- Developed and maintained custom interfaces across multiple high-load web platform products targeting diverse regional markets (Asia, Europe), handling complex business logic, transactional user flows, and **multilingual** support.
- Engineered a fully custom user engagement and payment ecosystem, including contextual modals, dynamic content personalization based on acquisition channel parameters, and personalized user flows - directly contributing to **user retention** and **conversion** across a platform with **100k+ monthly users**.
- Collaborated with Product Owner and Marketing Department to design and implement **data-driven** user engagement campaigns, resulting in measurable improvements in **conversion** and **retention metrics**.
- Optimized project performance, reducing **LCP** from 1.7s to 970ms, **resulting in a 15% overall performance improvement**.
- Refactored **localization** architecture by migrating from custom hooks to **next-intl**, leveraging **server-side rendering (SSR)** to improve both application performance and SEO across multilingual markets (EN, ZH, MS, FR, KO).
- Delivered a scalable reusable **UI component library** aligned with pixel-perfect design specifications, reducing component development time and minimizing technical debt.
- Implemented **PWA** support and **Meta Pixel** integration, expanding platform reach and enabling marketing attribution across mobile and desktop environments.
- Extended the native functionality of the **clsx** library to support an external **CSS framework**, improving styling flexibility across the codebase.
- Collaborated cross-functionally with **QA**, **Backend**, **Design**, and **Product** teams within a structured release workflow, consistently delivering high-quality solutions on schedule.

3Commas - SaaS platform for automated cryptocurrency trading and portfolio management

Frontend Engineer

02/2025 - 10/2025

- Engineered and successfully delivered custom **user data validation flows** and **personalized banner rotation** system on demand of marketing team.
- Managed refactoring of **technical documentation**, aligning it with modern design in pixel-perfect format.
- Contributed to developing **UI kit** to ensure consistency of **design tokens** across all platforms.
- Modernized and migrated legacy code to **TypeScript**, removing duplicates, delivering reusable hooks and components to improve stability and maintainability.
- Was responsible for **locales synchronization**, eliminating translation inconsistencies and errors.
- Ensured product quality by developing **unit tests (Jest/RTL)** and collaborating with **QA** engineers to ensure robust **end-to-end automation**.
- Facilitated seamless integration by collaborating with **Backend** and **Design** teams on **API contracts**, **state management**, and **component architecture**, ensuring technical alignment.
- Collaborated in cross-functional teams (QA, Backend, Designers, PO), driving product from concept to production and consistently delivering high-quality solutions.
- Conducted one-on-one and two-way sessions with feature requestors to gather specifications and feedback, guaranteeing the final implementation meets business expectations and needs.

Hygge Home - E-commerce application for Canadian market

Frontend Engineer

12/2023 - 02/2025

- Developed a new **e-commerce** application **from scratch** within cross-functional teams.
- Engineered a custom, reusable **component library** to ensure pixel-perfect design consistency across the project.
- Constructed and deployed core e-commerce functionality, including a **product listing page** with advanced filtering (price, color, brand) and **dynamic pagination**, alongside a product page view with a reusable custom slider and an advanced product info section.
- Designed and created a valid **shopping cart flow** for the project in collaboration with a designer.

- Implemented an admin panel for product management (create, edit, delete products) for non-technical staff to manage the product database.
- Integrated **React AG Chart** to generate sales performance graphs across all products and specific categories.
- Elevated development velocity by developing a suite of reusable components, which cut the average component development time by **23%** and minimized technical debt.
- Drove product design iterations by systematically analyzing user feedback, which led to design enhancements and contributed to an **18%** increase in user retention.

Education

Kyiv National Economics University
Bachelor degree, International Economic Relationships

Kyiv, Ukraine
2020 - 2024
