

Mateusz Rojek

Software Engineer

Summary

Frontend Software Engineer with 5 years of frontend development experience, including 2+ years of commercial, primarily working with React and TypeScript. Master's degree in Computer Science. Focused on building scalable, maintainable applications with emphasis on performance and simplicity. Comfortable working across frontend and backend boundaries, including API design and production debugging.

Technical skills

- Languages: TypeScript, JavaScript
- Frontend: React, Next.js, Angular, Redux, Zustand, Tanstack Query, React Hook Form, Tailwind CSS, Zod
- Backend: Node.js, NestJS, Express
- APIs: REST, GraphQL, WebSockets
- Architecture: Microfrontends, Distributed Systems, Event-Driven Architecture
- AI: LLM integrations, streaming, real-time UI
- Databases: PostgreSQL, MongoDB, Redis
- Testing: Jest, Vitest, Playwright, React Testing Library
- DevOps: CI/CD, Docker, GitHub Actions, Jenkins, Webpack, Vite

Education and Certificates

- 2020-2024, Bachelor's degree in computer science, Bialystok University of Technology
- 2024-2025, Master's degree in computer science, Bialystok University of Technology
- 2025, AZ900 - Microsoft Azure Fundamentals

Languages

- English - C1
- Polish - Native Speaker

Experience

Frontend Software Engineer

Grid Dynamics

05/2024 - Present

Project - Fortune 100 Retail Platform (client project)

10/2025 – 02/2026

- Developed and extended React components using TypeScript in a microfrontend architecture, contributing to shared component and experiences
- Investigated and resolved production issues reported via monitoring tools and support channels
- Worked closely with UX designers and backend teams to deliver new features
- Worked with and supported deployments through CI/CD pipelines

Key impact:

- Increased unit and integration test coverage across microfrontend repositories from 60% to 85%,
- Archived legacy, unused functionality behind feature flags, reducing code surface area and enabling safer incremental cleanup.
- Identified and resolved form validation inconsistencies between frontend and backend, eliminating production bugs caused by mismatched validation rules.
- Extracted component from a feature-specific implementation into a reusable module enabling reuse across microfrontends

Technologies: React, TypeScript, GraphQL, REST, Stencil as UI Component Library, Harmony as Components Ecosystem, Nucleus as RaaS solution, Jest, Vitest, CI/CD, Microfrontends

Project: Higher Education Web Platform (client project)

04/2025 – 10/2025

- Built responsive public-facing application and admin panel from scratch using React
- Implemented form handling and validation using React Hook Form and Zod
- Integrated frontend with backend services using TanStack Query
- Defined and refined API contracts with backend engineers

Key impact:

- Introduced React Hook Form and Zod, simplifying validation logic and increasing development speed
- Migrated modules from JavaScript to TypeScript, improving code reliability
- Migrated team workflow to Jira, improving sprint visibility and issue tracking

Technologies: React, TypeScript, TailwindCSS, TanStack Query, React Hook Form, Zod, Docker

Project: Internal Design System (UI Component Library)

11/2024 – 04/2025

- Developed and improved reusable UI components using React and TypeScript
- Identified and resolved inconsistencies between design specifications and implementation
- Extended component APIs, improving flexibility and composability
- Documented components in Storybook with clear usage examples

Key impact:

- Identified and resolved UI inconsistencies between design specifications and implemented components, aligning the library with the design system.
- Fixed invalid typography variants exposed in Storybook, aligning documentation with implementation
- Improved component reusability across projects by introducing additional props and customization options

Technologies: React, TypeScript, Storybook

Intern

Suse Polska

08/2023 – 11/2023

- Developed internal web applications using React
- Built and deployed applications in a Kubernetes environment
- Integrated multi-factor authentication using SAML2 protocol
- Collaborated with mentor to configure and test authentication flows across applications

Technologies: React, Kubernetes, SAML2, NetIQ Advanced Authentication
