EXPERIENCE

Wealthon - Lead Frontend Developer 10.2023 - current

- Design and implement user fingerprinting solutions in the client panel to enable ELIXIR bank transfers.
- Build the frontend layer for product onboarding flows based on BPMN processes using Camunda
- Integrate frontend applications with backend APIs.
- Develop and deliver new frontend features across multiple applications.
- Write end-to-end and unit tests to ensure application stability.
- Containerize applications using Docker, design and maintain CI/CD pipelines.
- Review code with strong attention to code quality, maintainability, and best practices.
- Lead the frontend team by planning work, delegating tasks, and supporting team members in daily development.
- Organize and lead internal knowledge-sharing sessions, including topic selection, preparation, and hosting online workshops.
- Solve complex problems across multiple frontend applications, define technical direction and make key technology decisions.
- Propose and lead the creation of a dedicated Design System for Wealthon products to unify and standardize frontend repositories, do technology research, select the tech stack, use Rollup as the main bundler, manage deployment, and continuously develop and maintain the package.
