PROFESSIONAL SUMMARY

QA Tester with commercial experience in testing complex corporate banking systems at Comarch. Strong background in manual and automated testing, API validation (SOAP/REST), and test automation using Cypress. Solid technical foundation including C/C++, Java, JavaScript, SQL. Currently evolving into a Technical-oriented QA Engineer role, focusing on deep system analysis, code-level validation, and advanced automation. Detail-oriented and analytical, I aim to bridge the gap between testing and development by investigating root causes and optimizing technical quality in demanding enterprise projects.

TECHNICAL SKILLS

Software Testing

- Manual Testing (Functional, Regression, Integration, Acceptance)
- Automated Testing (End-to-End, Regression)
- API Testing (SOAP, REST)
- Test case and test scenario design
- Data migration testing
- Basic security testing (Burp Suite)
- Defect analysis and root cause investigation

Programming & Scripting

- JavaScript, TypeScript, React
- C, C++, Java, Node.js
- SQL (MySQL, Oracle)

Tools & Technologies

- Cypress, Postman, SoapUI, Swagger
- Jira, Confluence, Git, Github, Gitlab, Gitflow, Jenkins, JMeter, Fork, SourceTree
- DBeaver, SQL Developer
- Elasticsearch, Kafka, Charles Proxy, Fiddler
- Burp Suite

AI & Productivity

- AI Tools: GitHub Copilot, ChatGPT, Claude, Gemini, NotebookLM
- AI for QA: Prompt Engineering, Data Synthesis, Automated Log Analysis

Operating Systems

- Windows, Linux, Android, IOS

PROFESSIONAL EXPERIENCE

QA Manual & Automation Tester

Comarch | January 2024 – Present

- Design and execution of manual test cases and test scenarios for corporate banking systems
 - Performing functional, regression, integration, non-functional, and acceptance tests
 - API testing using SOAP and REST protocols with Postman and SoapUI
 - Creation and validation of WSDL-based XML requests for Bank Connect services
 - Validation of data migrations (manual and orchestrated), including result verification and analysis using SQL
 - Development and maintenance of automated end-to-end tests using Cypress
 - Implementation of reusable test components and Page Object Model in test automation
 - Monitoring and analysis of automated test executions using Cypress Dashboard
 - Basic security testing using Burp Suite
 - Log analysis and technical verification to identify root causes of defects
 - Active participation in Scrum ceremonies (daily stand-ups, refinements, reviews, retrospectives)
 - Cooperation with clients to analyze, prioritize, and validate critical defects and test tasks
-

QA Manual & Automation Tester

Primeo | March 2026 – Present

- Design and execution of manual test cases and test scenarios for e-commerce
 - Performing functional, regression, integration, non-functional, acceptance tests
 - Development and maintenance of automated end-to-end tests using Cypress
 - Implementation of reusable test components with Page Object Model
 - Monitoring and analysis of automated test executions
-

EDUCATION

Kielce University of Technology

Bachelor's Degree – Information Technology (Part-time) | October 2021 – Present

Zespół Szkół Informatycznych

Kielce – IT Technician | September 2017 – May 2021

CERTIFICATIONS

Cypress from Scratch – Test Automation | Postman REST API Testing from Scratch | Practical Software Testing Course | GitHub Copilot in the Work of a Software Tester – Test Data Generation | AI in Testing – Introduction | Python Essentials 1 | Python Essentials 2
