

About me

I'm a junior fullstack developer building modern web applications and AI tools.

I focus on NodeJS, Next.js, and backend systems, with a strong interest in cybersecurity.

Skills

- Frontend: React, Next.js, Tailwind
- Backend: Node.js, Express, FastAPI
- Other: Python, n8n, Docker, CloudFlare, Railway, Git
- **And many more**

Adam Pukaluk

Fullstack Developer

adampukaluk.pl

Summary

Junior fullstack developer with hands-on experience building modern web applications and AI-powered tools.

Skilled in Next.js, React, Node.js, and API integrations, with a focus on backend systems and security.

Built a custom AI proxy ("Prompt Version Control") that filters sensitive data in agent workflows.

Comfortable working on real-world projects, from idea to deployment (Vercel, Cloudflare).

Looking to contribute to a team and grow through impactful, production-level work.

Projects

- ★ **Prompt Version Control (PVC)** – [GitHub](#)
 - AI data security firewall
- **TaxMaster** – [GitHub](#)
 - Tax learning and filing AI helper
- **FlashTalkAI** – [GitHub](#)
 - Quizlet-like learning app
- **SilowniaSamson.pl** (Commercial)
 - Gym website for client

Quick Summary

3+ years coding

Multiple production projects

Commercial experience

Education

Techni Schools – Non-Public Technical
High School

Major: Technician Programmer

2023 – 2028

- 5-year vocational program in programming and IT
- Qualification: Technician Programmer (351406)
- Currently attending 3rd year
- Practical training in backend & frontend development, databases, cybersecurity, and AI

PVC

- Developed an AI security system acting as a proxy that filters data sent to AI models
- Prevents sensitive data leaks in agent-based workflows (vibe coding)
- Built a web app, custom proxy, and CLI tool published on npm (**@adam903/pvc**) for managing rules and monitoring AI interactions
- Started developing an RMM module for team oversight (not fully integrated)

Participating in **Civil42 Hackathon** — a 28h event focused on building real-world “dual-use” technologies, combining AI, cybersecurity, and crisis-response systems to improve public safety and resilience.
