PROFILE

C# developer with experience in both backend systems and interactive applications. Designed and deployed a full-stack Azure-based weather alert platform with custom SQL architecture, automated alert generation, and secure email workflows. Developed and published mobile games using Unity. Strong focus on clean code, system design, and scalable solutions.

SKILLS

Programming: Backend & C#

- C# (.NET 8), ASP.NET Core
- Object-oriented design, SOLID principles
- REST API development
- Dependency Injection
- Clean architecture patterns
- Debugging and refactoring

Databases

- Azure SQL (schema design, normalization, relationships)
- Transactional operations and data consistency
- Token-based workflow persistence
- Query optimization and secure parameterization

Cloud & Infrastructure

- Microsoft Azure (Azure Functions, Azure SQL, Static Web Apps)
- Azure Communication Services
- Application monitoring (Application Insights)

Other

- Driving license: Category B
- English: C1
- Spanish: A2

PROJECTS

Weather Alerts: Azure based weather alerts platform

- Designed and deployed end-to-end system using ASP.NET Core (.NET 8), Azure Functions, Azure SQL, and static frontend.
- Modeled and implemented relational database schema (Users, Cities, Countries, UserCities, SubscriptionRequests, Alerts) with normalized many-to-many relationships.
- Built secure token-based subscription lifecycle with expiration handling and transactional database updates.

- Implemented automated alert pipeline (Azure Timer Trigger, cron twice daily) generating forecast-based notifications.
- Integrated Open-Meteo APIs and transformed hourly forecasts into 13 domain alert categories.
- Implemented retry logic, SQL parameterization, and constant-time token comparison.
- Developed REST API endpoints for subscription management and system operations.
- Deployed and monitored application in Azure.

Rental Service (recruitment project)

- Backend built with Python (FastAPI) using a Controller–Service–Repository architecture, token-based authentication, and REST API for device management.
- Vue.js frontend integrated with the backend and SQLite database, with data validation using Pydantic models.
- Included Groq LLM (API) to fix corrupted JSON with initial data.

Mobile Games

- Developed and published *2 Player Pong* and *Color Shot*.
- Built gameplay logic, UI, animations, and core systems using C# and Unity.
- Tested, optimized, and deployed the games for mobile platforms.

Touch Gestures Plugin

- Created a Unity plugin for handling multi-touch gestures; available on GitHub.
- Designed reusable components and modular architecture to support scaling.

EXPERIENCE

Paramedic, Zespół Szpitali Miejskich w Chorzowie — 2019 - present

Provide medical support in high-pressure environments.

Paramedic, PCM w Piekarach Śląskich — 2025 - present

Provide medical support in high-pressure environments.

EDUCATION

Informatics (IT / Computer Science)

University of Economics in Katowice | 2024 - expected 2027

Emergency Medical Services

Medical University of Silesia | 2016 - 2019

COURSES

SQL Course

[DataCamp.com](https://www.datacamp.com) | 2025

Introduction to APIs in Python

DataCamp.com | 2025

C# & .NET Bootcamp

Coder Academy in Katowice | 01.2020 - 10.2020
