Summary

+6 years experience in IT. A curious full-blown developer with strong creative thinking skills, high energy, and integrity, skilled in developing complex solutions, interested in writing new code. Has the ability to create effective algorithms, interact positively, and communicate appropriately with team members. Active in commercial projects. Able to grasp new technologies and concepts quickly to develop innovative and creative solutions to problems. Always eager to learn about various technologies, tools, and libraries. Seeking to help Companies develop their product as a Frontend, Backend and Software Developer, as well as grow and develop his own skills.

Experience

Hypnotes Inc.US (Remote) *July 2022-Present (10 months+)*

Front End Developer

- On the commercial project;
- Detecting and fixing errors/bugs
- Development of the interface of the project by using ReactJs and NextJs
- Experienced in writing modular and reusable codes, using build tools and package managers,
- Developed the application for responsive to different screen resolutions using Ant Design, Bootstrap and CSS media queries,
- Built a Dashboard page showing data related to users integrated with Database,
- State management applied using React States, Hooks and Redux,
- Requesting apis using Async, Await and Fetch structures to view data from various platforms,
- Making changes on UI, regarding customers requests
- Experienced applying React functional and class components,
- CRUD operations/functions developed to handle HTTP request and responses to communicate DB,
- Developing the payment page of the e-commerce website with JS functions using DOM, iterator, callback functions, string array functions and events,
- Used Kanban & Agile methodologies and Trello while team working on individual & group projects.
- Developed interactive, responsive and scalable frontend using Ant Design, HTML5, CSS3, JavaScript ES6, React

Clarusway LLC, US(Remote) *Feb 2022 - July 2022 (5 months)*

Front End- Backend Developer (Mentor):

- Web Design with HTML, CSS, SASS(SCSS) and Bootstrap-5 codes,
- Support HTML and CSS projects using JS Dom manipulation and event listeners,
- Using state hook and component structures in various projects
- Working with React-router, bootstrap and Axios libraries for user-friendly preparation of prepared websites,
- Combined Material UI and Semantic UI libraries to achieve better UI experience,
- Studied on Computational Thinking, Operating Systems, Version Control Systems(Git & Github), Software Development Life Cycle (SDLC),
- Used SCRUM & Agile methodologies and JIRA while team working on individual & group projects.
- Working with Django and PostgreSQL,
- Designed NavBar utilizing Private and Public Router,
- Transition of data from page to page implemented by Context API,
- Authentication handled using Firebase.js and helper functions,

- Continuous Integration (CI) applied with Github-Firebase-Heroku,

Mathematics Teacher: International American School of Warsaw *Oct 2021 - Present (1 year 4 months + Present)*

Mathematics & Computer Science Educator: Freelance *Dec 2017 - Oct 2021 (3 years 11 months)*

Mathematics & IT Teacher: BILIM-INNOVATION International Social Foundation *Sep 2007 - Oct 2017 (10 years)*

Technical Skills

HTML5 | CSS3 | JavaScript | React.js | Redux | SASS | Bootstrap | Material.UI | Python | SQL | PostgreSQL | Django | Git | GitHub | APIs | Agile | Jira | SDLC | OOP | RESTful APIs | NextJS | And Design |Trello

Soft Skills

Curiosity | CreativityAnalytical Thinking | Time Management | Adaptability | Problem-Solving Abilities | Self-Motivated | Strong Communication | Project Management | Planning | Continuous Learning | Collaboration & Teamwork | Coaching Mindset | Resilience | Multilanguage | Leadership

Projects

- **Django-React Blog App** : In this project, it is aimed to create blog posts using django as backend and display them on the dashboard. Adding, deleting and updating blog posts can be done. In the project, PostgreSQL database was used for storing data, material-ui library for styling, react-router library for page transitions, formik and yup libraries for form structure and validation, and react-toastify library for notifications. In addition, the django backend structure was used for register, login and authorization processes. *Skills/Tools : PostgreSQL, Material-ui Library, React-router Library, Formik and Yup Libraries, React-toastify Library, Django*
- **Sass Project** : In this project, the portfolio website is designed using HTML and SASS (SCSS) codes for style. In this Sass/SCSS project, I structured a project into separate files and folders. *Skills/Tools : HTML, Sass/SCSS*
- **Bootstrap Project** : In this project, the Clarusway School Website was designed using HTML and Bootstrap-5 for styling. The purpose of this Bootstrap-5 project is to enable the use of Bootstrap-5 (class names) for styling and to take advantage of CSS Frameworks. *Skills/Tools : HTML, CSS Frameworks, Bootstrap-5*
- **IOS-Calculator (JS)**: In this project, the goal is to make a functional and visual clone of the calculator of an iOS device. *Skills/Tools : HTML, CSS Frameworks, JS Dom Manipulation and Event Listeners.*
- **To-Do-App (Javascript)**: In this project, a simple To-Do application was made using the array structure. Users can add tasks from the browser, mark tasks as completed and delete them. Completed/total number of tasks can be displayed with a counter. *Skills/Tools : JS Dom Manipulation and Event Listeners.*
- **Checkout Dynamic (JS)**: Our goal was to develop a real e-commerce website's checkout page for that project. There is a cart for buying products, and we can increase or decrease the number of products. By changing a parameter in the cart, our js functions calculate the cart total price. DOM, iterator, callback functions, string-array functions and events are used in our page. Additionally, we can remove products from the cart by clicking the remove button and decreasing the amount to "0". In that case, our page asks us to delete the product from the cart. As soon as you confirm the deletion, the sour chart total is recalculated by the js functions. *Skills/Tools : DOM, Iterator, Callback functions, String-array functions and Events.*
- **World Flags App** : The goal of this project is to make an api request from <https://restcountries.com/> and to display the desired data about the countries. *Skills/Tools : Async, Await and Fetch.*
- **Movie Ticket App** : In this project, it is aimed to create an application for a website that sells online event tickets. Users can view the events, view the available seats for the event they have selected, claim what they want among them and see the amount they will pay. *Skills/Tools : Json, Local Storage and Array Methods.*
- **Weather Condition App** : The purpose of this project is to make a weather application using the <https://api.openweathermap.org> api. It is to bring and display the weather conditions of the location desired by the user. *Skills/Tools : Async await methods.*
- **Movie App** : In this project, it is aimed to display cinema posters by using the tmdb api. There is a search feature according to the entered word. *Skills/Tools : React-router library, Bootstrap library, Axios library and Firebase*
- **Firecontact App** : In this project, it is aimed to create a contact list using firebase realtime-database. Adding, deleting and updating contacts can be done. *Skills/Tools : Firebase realtime-database library, Semantic-ui library and React-toastify library.*

- **Redux Store App** : In this project, it is aimed to create a store app using Redux and store the project states in the store Redux, and explain how to reach the store variables and methods from other React components and use them. *Skills/Tools* : *Redux, React components*
- **Fireblog App** : In this project, it is aimed to create blog posts using firebase realtime-database and display them on the dashboard. Adding, deleting and updating blog posts can be done. In the project, firebase realtime-database library was used for storing data, material-ui library for styling, react-router library for page transitions, formik and yup libraries for form structure and validation, and react-toastify library for notifications. In addition, firebase was used for login and authorization processes. *Skills/Tools* : *Firebase realtime-database library, Material-ui library, React-router library, Formik and yup libraries, React-toastify library, Firebase.*
- **Quiz App** : In this project , it is aimed to create a Quiz app using React.js at frontend and Django-Python at Backend sections. In the project db.sqlite3, djangoestframework, Material-UI,Netlify were used.
 - **Birthdate Reminder (React)**: Project goal is creating birthdate reminder by using React
 - **Kokteyl (React)**:Project aim is creating dynamic web-page with React
 - **Slider (React)**:Project aim is creating Slider web page with React
 - **Hangman Game (JS)**:Project aims to create a hangman game with Js code.
 - **GooglePage**:Project aims to create google landing page by using HTML-CSS attributes.
 - **Parallax-website**:Project aims to create a parallax website.
 - **Responsive Web Design**:Project aims to create website site pages by using HTML-CSS attributes..
