WORK EXPERIENCE

Clurgo, January 2022

- Primarily specializing in React and its ecosystem, with additional experience in Angular and Vue.js. Responsible for integrating frontend applications with backend services, developing dynamic and reusable components, and ensuring seamless communication between frontend and backend teams. Actively involved in task creation and management in Jira, including assigning tasks to team members to support efficient project workflows.

PROJECT

HR Resource Management Application

Technologies: React, TypeScript, React Query, Zustand, Vue 3

- A web application for managing human resources, designed to facilitate access to tax information, employee benefits, and working hours. The system streamlines HR processes
- Developed a reusable component library to ensure consistency and improve development efficiency.
- Utilized React Query for data fetching and caching, and Zustand for state management.
- Created custom hooks to optimize code reusability and maintainability.
- Ensured the application was fully responsive and adhered to accessibility and web standard

Platform for Patients and Physiotherapists

Technologies: React, TypeScript, Zustand, MediaPipe AI

- A web application designed for patients and physiotherapists, enabling video consultations, exercise planning, and real-time monitoring of patient exercises using AI-powered analysis. The platform enhances remote physiotherapy by providing interactive and data-driven treatment plans.
- Developed a Progressive Web Application (PWA) for better performance and offline capabilities.
- Built a responsive and user-friendly interface for seamless video consultations.
- Utilized React and Zustand for efficient state management and smooth user interactions.
- Created interactive exercise plans with real-time progress tracking.
- Integrated AI-based movement analysis to monitor and assess patient exercises.
- Optimized performance and accessibility to enhance the user experience

Banking Employee Platform

Technologies: React, TypeScript, Redux, Formik, React Table

- A web application designed for bank employees, streamlining global payments, cash management, corporate client onboarding, and business banking processes.
- Developed a modular and scalable application supporting open banking APIs, financial dashboards, and corporate client management tools.
- Implemented fully automated approval processes with secure document exchange and qualified digital signatures.
- Focused on performance optimization, security, and scalability for enterprise-level banking environments.
- WCAG
- OWASP

SKILLS

- React ecosystem – experienced with React, Redux, Zustand, Context API, and worked with React Query for data fetching and caching.
- Next.js
- UI libraries – used Material-UI, Ant Design, Bootstrap, and Tailwind CSS for building modern and responsive interfaces.
- Frontend frameworks : Angular (with RxJS and NgRx) and Vue.js (with Pinia).
- Core web technologies – strong knowledge of HTML5, CSS3, JavaScript (ES6+), and TypeScript.
- React Hook Form for handling form validation and state.
- Styling approaches – SCSS, Styled Components, CSS-in-JS, and the BEM methodology for scalable and maintainable CSS.
- Version control with GIT
- Jest
- Docker
- Storybook
- Vite
- Opencode + Copilot

EDUCATION

- Cognitive Science - Master's Degree
- Cognitive Science - Bachelor's Degree
