

MARCIN GAJDA

32-442 Krzywaczka 1712/2 | +48 608 447 495 | gajdamarcin45@gmail.com

Marcin is a seasoned Frontend Developer with 9 years of experience in building and optimizing e-commerce platforms using modern technologies such as React, Redux, and TypeScript. Through his work, he has developed strong technical expertise in designing scalable architectures, improving user experience, and integrating complex payment and mapping systems.

He is intellectually curious, detail-oriented, and highly committed to code quality and performance. Marcin enjoys solving challenging problems and believes in writing clean, maintainable solutions that make products better for users and easier for teams to develop further.

As a teammate, Marcin values open communication and collaboration, contributing ideas that help shape both technical direction and team culture. He constantly seeks ways to improve processes and simplify solutions without losing flexibility.

Outside of work, Marcin is passionate about mountain and cycling tourism, climbing, and volunteering. He brings the same persistence and focus from these pursuits into his professional life.

Skills

- **Frontend:** React, NextJs Redux, Redux-Saga, TypeScript, Styled Components, tailwindcss, RxJS, xState
 - **Testing:** React Testing Library, Enzyme
 - **Backend:** Node.js, Nestjs, Express, MongoDB, Postgres, C#
 - **Other:** SEO, performance optimization, payment & map integrations
-

Professional Experience

10.2021-12.2025

SILKY CODERS, Gdańsk, Poland
Senior Frontend Developer

In my role as a Frontend Developer, I have been responsible for driving the development and optimization of key areas of the e-commerce platform, including login flows, shopping cart functionality, and order completion processes. My work has focused on enhancing performance and maintainability by streamlining the codebase and optimizing the delivery pipeline to improve the customer experience.

A significant part of my contribution involved designing and implementing a new Pickup Point Map solution using **RxJS**, **xState**, and **Google Maps**, ensuring scalability and seamless user interaction. Additionally, I integrated modern payment solutions such as **BLIK**, **PayPal**, and **Braintree**, expanding the platform's flexibility and reach.

To ensure reliability and long-term quality, I consistently applied best practices in testing and maintainability, developing comprehensive unit tests and fostering a culture of clean, test-driven development.

- Developed and refactored checkout and order modules for major e-commerce clients.
- Implemented **Pickup Point Map** using RxJS, xState, and Google Maps.
- Integrated PayPal, BLIK, and Braintree **payment systems**.
- Delivered a collapsible checkout UI with dynamic sections.
- Led a codebase simplification effort, **reducing size by ~8%**.

X-KOM, Kraków, Poland
Frontend Developer

10.2017-09.2021

In my role at **X-Kom**, I was deeply involved in the complete redevelopment of the company's e-commerce platform, transitioning from a legacy system to a modern SPA/SSR architecture using **React**, **Redux**, and **TypeScript**.

This initiative covered all core areas of the platform - from the product listing and product card to the shopping cart and checkout flow - ensuring a seamless and high-performing customer experience.

I played a key role in implementing **PayU payment integration** and an advanced **Pickup Point map** using **Leaflet**, both of which contributed to a smoother and more intuitive order process. Additionally, I designed and developed a **site-wide chat system** that maintained synchronization across multiple open browser tabs, ensuring consistent communication and engagement for users.

Another important aspect of my work focused on the dynamic relationship between **payment and delivery methods**, building logic that enabled real-time synchronization and configuration management. Throughout the project, I prioritized SEO optimization and performance tuning to enhance both visibility and efficiency, while maintaining a focus on scalable, maintainable code.

- Built a new SPA/SSR web platform from scratch.
- Implemented **PayU integration** and Pickup Point maps (Leaflet).
- Designed a site-wide chat system **synchronized across browser tabs**.
- Created payment/delivery synchronization logic.
- Improved **SEO and metadata** for better search visibility.

Professional Projects

Open Gate – Multi-Tenant SaaS Platform for Residential Communities

Next.js, NestJS, GraphQL, gRPC, PostgreSQL, Redis, Docker

A multi-tenant platform streamlining day-to-day operations of small residential communities – centralizing resident communication, announcement broadcasting, and remote gate access control in a single, secure system. Each community operates as an isolated tenant with its own members, roles, and customization, while sharing a common, scalable infrastructure.

- **Microservices Architecture:** Designed and built a 4-service backend (BFF, Core, Notify, DB) communicating via gRPC/Protobuf, with a Next.js 15 (App Router) frontend consuming a unified GraphQL API and CQRS business logic in the Core service.
- **Multi-Tenancy & Auth:** Implemented tenant ownership model (staff M:N, memberships, per-tenant customization) and a full auth stack – OAuth 2.0 (Google, GitHub, LinkedIn, Azure AD), WebAuthn/Passkeys, TOTP 2FA, and risk-based assessment on Redis-backed sessions.
- **Resilience & Real-Time:** Added circuit breaker, multi-tier rate limiting, correlation-ID tracing, and graceful shutdown; delivered GraphQL subscriptions over WebSocket plus a notification service integrating Email (SMTP), SMS (Twilio), and Signal.
- Solo Project: Owned end-to-end delivery – architecture (ADRs), Protobuf contracts, all four backend services, Next.js frontend, Docker Compose setup, and documentation.

Full-stack Authentication & Client System

Next.js, NestJS, PostgreSQL, Redis

- **Live Demo:** authentication-client.vercel.app
- **Multi-Method Authentication:** Built a robust security layer supporting Social Auth (Google/GitHub), TOTP (Google/Microsoft Authenticator), and Security Keys (WebAuthn).
- **Verification Engine:** Implemented real-time identity verification via SMS and Email codes, ensuring production-grade account protection. Developed a secure, production-ready authentication system using Next.js for the frontend and NestJS for the backend API.
- Implemented high-performance data storage using PostgreSQL and integrated Redis for efficient session management and caching.
- Focused on security best practices, including, password hashing, and protected route logic.
- Note: The backend and frontend is hosted on a free-tier server; please allow a moment for the initial service wake-up (cold start).
- **Source Code:** Full access to repositories is integrated into the user dashboard upon secure login.

University Management & Communication Platform

Next.js, Node.js, PostgreSQL

- Designed and built a comprehensive web application to streamline interaction between students and academic staff.

- Messaging System: Implemented a real-time communication module for exchanging messages between users.
 - Academic Management: Developed features for grade management (adding/viewing grades), student/lecturer lists, and automated lecture scheduling with a calendar view.
 - Role-Based Access Control (RBAC): Built an administrative panel for managing users and assigning specific roles (Student, Lecturer, Admin) with granular permissions.
-

Education

- **Bsc in Computer Science, Specialization: Programming**, University of Management and Banking 2016-2020
-

Interests

- mountain tourism, climbing & cycling tourism.
- volunteering for the Great Orchestra of Christmas Charity (**WOŚP**)
- member of the board of the OF association
