PROFESSIONAL SUMMARY

Senior Frontend Engineer with 12 years of experience designing and building high-performance, scalable user interfaces using React.js, Next.js (SSR/SSG/ISR), and TypeScript. Deep expertise in Redux Toolkit, React Query, and D3.js for data-heavy enterprise applications. Proven track record delivering responsive, accessible (WCAG 2.1 AA), data-driven UIs integrated with REST APIs — across global SaaS platforms serving millions of users. Collaborative cross-functional engineer with strong alignment to backend teams, designers, and product owners in Agile environments.

CORE TECHNICAL SKILLS

Frontend Core	React.js 18 (Hooks, Context, Code Splitting, Lazy Loading), Next.js (SSR/SSG/ISR), TypeScript strict mode
State Management	Redux Toolkit, Redux Saga, React Query, Zustand, Context API
Data & Visualization	D3.js, REST API integration, GraphQL, BFF pattern
Styling	CSS3, SASS, Tailwind CSS, Styled Components, Emotion, MUI v5, Responsive Layouts
Testing & QA	Jest, React Testing Library, Playwright, Cypress, MSW (API Mocking) — Unit, Integration & E2E
Performance	Core Web Vitals, Lighthouse, Webpack, Vite, Bundle Analysis, Code Splitting, Lazy Loading
Cloud & DevOps	AWS (cloud-native), GitLab CI/CD, Docker, Datadog RUM/APM, New Relic, Sentry
Accessibility & UX	WCAG 2.1 AA, Semantic HTML, Keyboard Navigation, Screen Reader Testing
Component Systems	Storybook.js, Chromatic Visual Regression, Design Systems, Reusable UI Libraries
Architecture	Micro Frontend, Microservices, AEM, Contentful CMS, Hybris, MongoDB, Redis

WORK EXPERIENCE

Senior Frontend Engineer

Heineken · Kraków, Poland · Nov 2024 – Feb 2026 · Enterprise SaaS · Global Marketing Platform

- Architected scalable SPAs using React.js, Next.js (SSR/SSG/ISR), TypeScript strict and Redux Toolkit powering marketing workflows across 17+ countries on a microservices backend.
- Built rich data interfaces with React Query for server-state management — eliminating redundant API calls and improving perceived UI performance across high-traffic product pages.
- Integrated REST APIs and a GraphQL/BFF layer with backend teams, defining clear data contracts and optimising fetching strategies for responsiveness at scale.
- Engineered a TypeScript-strict Contentful CMS integration using generics and discriminated unions — zero any casting, eliminating an entire class of runtime content-type errors.
- Raised Lighthouse scores from low 60s to 88–93 through systematic performance engineering — Webpack bundle analysis, code splitting, lazy loading — cutting Time to Interactive by ~40%; tracked Core Web Vitals via Datadog RUM.
- Built and maintained a Storybook + Chromatic component library with Styled Components enforcing WCAG 2.1 AA compliance across the full product suite.
- Integrated MSW (Mock Service Worker) for deterministic API mocking — enabling reliable integration tests and decoupling frontend from backend availability.
- Owned AWS deployment architecture end-to-end with GitLab CI/CD pipeline enforcement; mentored junior engineers through pair programming and structured PR reviews.

Senior Frontend Engineer

Luxoft · Kraków, Poland · Aug 2022 – Oct 2024 · Enterprise Consulting · High-Traffic Client Applications

- Led a team of 4 frontend engineers across sprint planning, architecture reviews, and code quality initiatives — improving delivery consistency and engineering culture.
- Designed scalable React.js + TypeScript + Redux Toolkit SPAs; introduced React Query for server-state management, eliminating redundant API calls.
- Implemented rich, interactive data tables using component libraries — improving UX for complex data-heavy application screens serving thousands of concurrent users.
- Built responsive, accessible user interfaces with Styled Components and Emotion — enabling theme-driven styling across large-scale multi-team codebases.
- Integrated REST and GraphQL APIs across multiple client environments; worked with backend teams to define data contracts and optimise fetching strategies.
- Established a test culture using Jest, React Testing Library, Playwright with full CI integration and visual regression coverage — significantly reducing release regression rates.
- Monitored production health using Datadog APM and RUM; migrated legacy CSS/JS codebases to React — reducing code duplication by 60%+.

Senior Frontend Engineer

Deloitte · Hyderabad, India · Sep 2018 – Jul 2022 · Enterprise Consulting · Internal Portals & Client Products

- Translated complex business requirements into production React.js SPAs integrated with AEM, AWS, and Hybris across finance, retail, and public sector enterprise clients.
- Developed responsive, accessible UI interfaces enforcing WCAG 2.1 AA compliance through structured code reviews and automated test coverage.
- Designed modular, reusable Storybook-documented component architectures — reducing feature development time and maintaining consistency across large-scale portal deliverables.
- Integrated REST APIs and shipped multi-locale internationalised frontends; set up New Relic dashboards for frontend observability across multi-region deployments.
- Led a 2-person frontend team; delivered Agile sprints on schedule with zero accessibility regressions on client handovers.

Frontend Engineer

Capgemini · Hyderabad, India · Sep 2016 – Sep 2018 · Digital Agency · Client Web Projects

- Built responsive, accessible web interfaces using HTML5, CSS3, JavaScript; eliminated render-blocking resources through performance profiling, measurably reducing page load times.
- Implemented cross-browser compatible layouts and translated wireframe mockups into pixel-accurate, responsive HTML/CSS pages — reducing designer feedback cycles.
- Integrated REST APIs with backend teams, handling async data fetching and dynamic content rendering across multiple client-facing web projects.
- Collaborated closely with QA engineers to validate cross-browser rendering across IE, Firefox, Chrome, and Safari — consistently meeting sprint commitments in Agile delivery.

Frontend Engineer

Virtusa · Hyderabad, India · Apr 2014 – Sep 2016 · Software Services · Web Application Development

- Developed cross-browser web applications using HTML5, CSS, JavaScript, AngularJS; integrated RESTful APIs with backend teams, maintained 3 production websites.
- Built dynamic UI features using AngularJS directives and services — improving user engagement and reducing full-page reloads through client-side rendering.
- Maintained detailed technical documentation for all developed modules — enabling smoother knowledge transfer and reducing onboarding time for new team members.
- Collaborated with backend developers and QA engineers to reproduce, debug, and resolve production defects — strengthening core skills in browser DevTools and JavaScript debugging.

EDUCATION

Bachelor of Engineering — Electrical Engineering

Arjun College of Technology and Sciences, Hyderabad · 2013
