

YVES TUMUKUNDE

Junior .NET Developer · C# & Azure cloud

+48 789 677 567 · yvess0005@gmail.com · [linkedin.com/in/yves-tumukunde](https://www.linkedin.com/in/yves-tumukunde) · github.com/tumukundeyves

C# developer with professional internship experience designing REST APIs, automating workflows, and shipping backend features in an Agile team. Comfortable across the full stack from database queries to TypeScript frontends and fluent in English (C1) with prior cross-functional collaboration across remote, international teams. Currently studying Computer Engineering while deepening low-level systems knowledge at 42 Warsaw.

TECHNICAL SKILLS

.NET & Backend: C# (.NET), REST API design, OOP principles, design patterns, unit testing

Databases: PostgreSQL, MongoDB, NoSQL

Cloud & Infra: Microsoft Azure, AWS, Kubernetes, Linux deployment & monitoring

Frontend: TypeScript, JavaScript, React, Node.js, HTML/CSS, Tailwind

Dev Tooling: Git/GitHub, Jira (Agile), Bash scripting, Docker, Vite, npm

Languages: English C1 (business fluent) · French B2 · Polish A2

EXPERIENCE

C# Software Engineer (.NET) — Intern · Akvelon · Remote Feb – Apr 2026

- ▶ Designed and integrated REST APIs across 3 backend services using C# and OOP best practices, improving inter-service reliability and reducing redundant call overhead.
- ▶ Automated a recurring data-validation workflow end-to-end, cutting manual QA effort by ~40% per sprint and demonstrating measurable value within the first month.
- ▶ Resolved 12+ production defects each root-caused, fixed, unit tested, and documented contributing to a stable release with zero regressions introduced.
- ▶ Delivered features on schedule across a fully remote Agile team using Git branching and Jira, participating in sprint reviews and design discussions with senior engineers.

IT Support Specialist · Ivy Technology · Bydgoszcz, Poland Dec 2023 – May 2025

- ▶ Diagnosed complex technical issues across application and OS layers, translated findings into precise bug reports that enabled engineering teams to reproduce and fix problems faster.
- ▶ Identified 3 recurring root causes through structured incident analysis, eliminating repeat failures and reducing ticket volume — evidence of systematic, developer-minded problem solving.

PROJECTS

Real-Time Crowd Counting System · Python · Flask · TensorFlow · YOLOv5 · TypeScript · Docker 2024

- ▶ Architected and deployed a containerised ML inference pipeline as part of a 4-person team; owned the Flask API layer and TypeScript integration, achieving stable 15 FPS real-time output on CPU hardware.

Opentdb-Visualizer · React · Node.js · TypeScript · Recharts · Vite 2025

- ▶ Built a full-stack app consuming a live REST API with dynamic charting; implemented edge-case handling for malformed payloads and responsive layout scaling shipped end-to-end solo.

EDUCATION

B.Eng. – Computer Engineering & Mechatronics · WSG University · Bydgoszcz, Poland Feb 2023 – Sep 2026

Coursework: OOP, data structures, networking, embedded systems, databases.

Software Engineering — Peer-to-Peer Programme · 42 Warsaw · Warsaw Sep 2025 – Present

Low-level C, Linux systems, algorithm design under time pressure — no lectures, pure project delivery.

CERTIFICATIONS

Data Structures & Algorithms — freeCodeCamp Mar 2025 <https://l1nq.com/5TdBy>

Cybersecurity Risk Management — Risk & audit frameworks Nov 2024 <https://l1nk.dev/jzdHN>

Azure Monitoring Tools — Microsoft Learn Jan 2026 <https://l1nk.dev/yAL5k>

Site Reliability Engineer Bootcamp — SRE · incident response · observability Jan 2026 <https://shorturl.at/gopWw>
